WHY HIGH EFFICIENCY?

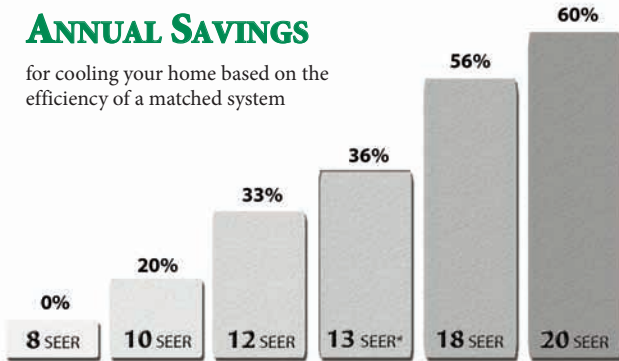

The demand for energy is growing and the cost continues to rise. A high efficiency system can reduce cooling cost by over 50% (*see chart*). If a new high efficiency system is not in your budget, then annual maintenance is the next best thing. Every year that you do not service your system it accumulates buildup on the coils, which decreases the efficiency of the system and the comfort of your

home. You may have a 12 SEER system, but if you have not had your system serviced, it may be operating with the efficiency of a 10 SEER system. Union Services offers maintenance packages and can service any brand of equipment. We also offer free estimates on new heating and cooling systems. If you have any questions about service, maintenance, repair, or replacing your system give us a call.

ANNUAL SAVINGS

for cooling your home based on the efficiency of a matched system

*Minimum efficiency established by the Department of Energy. Potential energy savings may vary depending on your personal lifestyle, system settings and usage, equipment maintenance, local climate, actual construction and installation of equipment and duct system.
